

3 new career publications for K-12: An overview

Believing that helping today's children think about their career development is an essential part of delivering the right education – from early childhood years up to high school and beyond, CERIC has launched three new resources that play a key role in student success.

The Early Years: Career development for young children is a set of guides for parents and educators to help children develop a healthy sense of self and achieve their full potential. This research conducted at Memorial University explores how to positively influence the career development process of children aged 3 to 8 years, emphasizing the use of experiential and play-based learning methods.

Computing Disciplines: A quick guide for prospective students and career advisors is a guide for high school teachers, counsellors and post-secondary career advisors. Developed in partnership with Mount Royal University, this guide helps students to understand the distinct disciplines within the computing field, and related educational and career paths that best suit their interests and abilities. ceric.ca/computing

Bridging Two Worlds: Supporting newcomer and refugee youth is a guide for K-12 educators, school counsellors and administrators. Launched in partnership with University of Winnipeg, this curriculum guide prepares educators to better integrate the growing numbers of newcomer and refugee students into Canadian classrooms through culturally responsive career development. ceric.ca/twoworlds

Published by CERIC, a national charitable organization that advances education and research in career counselling and career development, these guides are available for free download at ceric.ca/publications or available for purchase.
